WE MAKE THE WORLD MOVE

# INTERROLL DRUM MOTORS FOR LOAD HANDLING

S U M M A R Y

## Drum up more business

If you want to be the leader of the pack in your market, you need to be sure you can count on your partners, day and night, for solutions beyond the obvious as well as unmatched quality and service. This is synonymous with Interroll and its diversified range of Drum Motors, which are designed to tackle even the most difficult challenges in unit load handling applications.

Interroll Drum Motors, unique in concept and design, produce cutting-edge solutions, which will raise the overall efficiency and reliability of customer applications in materials handling the world over.

### At the heart of the conveyor

Interroll Drum Motors have been specifically designed for belt conveyors and associated material handling equipment. This means that we take the worry and hard work out of your drive system, leaving you to do what you do best, designing the best conveyor for the application. But it doesn't stop there. We have over 50 years experience in the food processing industry and other extremely demanding industrial applications which we are happy to share with you (yes, we are all heart!) There is no doubt about it; the Interroll drive provides a quick and easy way of building maintenance-free, hygienic and energy-efficient belt conveyors. What more could you ask?

### Ease of installation saves time and money

With fewer installation parts, Interroll Drum Motors are much quicker and easier to install than conventional drive systems, requiring less than a quarter of the time needed to fit a multi-component drive. Fewer parts mean cost reduction for conveyor design and purchasing of parts.

### Built to withstand the worst conditions

With the entire drive mechanism totally enclosed in a steel shell sealed to IP66/67 standards, Interroll Drum Motors will keep operating at 100% in harmful environmental conditions such as water, dust, grit, chemicals, grease, oil and even during high pressure wash-down procedures.

### Food grade quality

Tests have identified conventional external belt drive systems as being the main source of contamination in food processing. Interroll Drum Motors, however, eliminate this risk due to the smooth, profiled, stainless steel finish, totally sealed design and ingress protection of IP66 or IP67.

### At least 32 % more energy efficient

Independent test results showed Interroll Drum Motors used 32% less energy (unloaded) and 47% less energy (loaded) than a comparable geared motor drive.

### Higher output

Interroll Drum Motors have a much higher efficiency than conventional drives, which normally transfer approximately 75% of their mechanical efficiency to the belt, compared to the Interroll drive which transfers up to 97%.

### Space-saving design

Because the drive unit and bearings are mounted within the drum shell, the Drum Motor takes up much less space than conventional drives such as gear motors. No need for costly extras like chains, v-belts, couplings, bearings, support structures and special guarding.

### Safe and sound working environment

An Interroll Drum Motor enhances the safety of your working environment. As a self-contained component without protruding parts and with fixed external shafts, it is probably the safest drive unit available for state-of-the-art material handling equipment. The only moving parts are the drum shell and bearing housings.

What is more, our new Drum Motors incorporating durable high grade polished steel gears, reduce previous sound levels by 18% and are therefore quieter than many other drives found in the market today.

### Maintenance-free operation

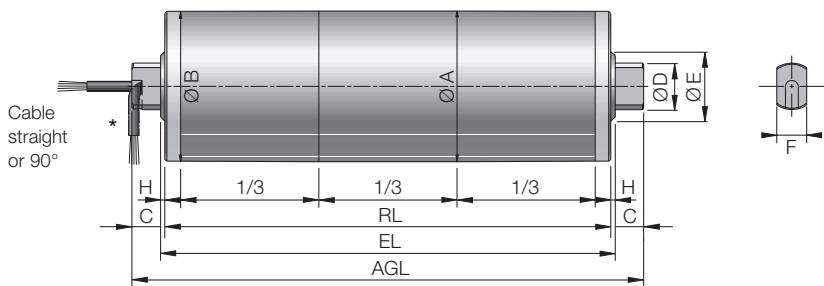

End-users benefit from an Interroll Drum Motor because it requires absolutely no maintenance. The sealed-for-life Drum Motor design ensures trouble-free conveying of foodstuffs, unit loads or parts under the most arduous conditions. No maintenance results in lower operating costs and higher productivity.

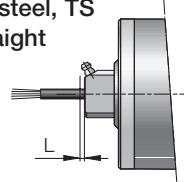

## Interroll Drum Motor 80s and 113s

# A comprehensive package of solutions to suit your application

To suit individual applications, Interroll Drum Motors are available with a wide range of voltages, powers, speeds, high-torque motors, accessories and many other options.

## Modular belting

Interroll provides pioneered drive solutions for modular plastic belt conveyors utilising a range of purpose-designed, food quality FDA approved profiled lagging. Other options include profiled rubber and PU lagging, and stainless steel or polymeric sprockets.

## Idler Pulleys

Choose from idler pulleys manufactured from mild steel, stainless steel or polypropylene.

## Brackets for quick installation

Brackets make the installation of an Interroll Drum Motor quick and easy. They are available in aluminium, steel, cast iron and polyethylene. Screw adjustable tension brackets are also available.

## Variable speed control

To provide maximum flexibility of speed and control, all Interroll Drum Motors can be connected with most types of frequency converters.

## Frequency converter

Take advantage of our coordinated package, consisting of an Interroll Drum Motor supplied with a frequency converter pre-set and optimised with the motor parameters and on site "plug & play" facility, to:

- Vary the belt speed and direction for several systems or for auxiliary conveyor systems.
- Vary the belt speed and direction in machines, e.g., for various dispensing operations.
- Optimise the starting and reversing torque for intermittent stop/start & reversing operations.

These frequency converters can easily be integrated into simple or more complex control systems.

## Encoder

For monitoring revolutions, speeds, distance and direction ask for an Interroll Drum Motor with integral incremental encoder. The combination of drum motor, encoder and frequency converter permits high-levels of flexibility, drive control and system data feed back.

## Direct interchangeability

Interroll can replace all other makes of drum motors in existing conveyor systems.

## Repairs and servicing

Interroll offer a 24/7 hotline service and will repair or replace any make or model of motorised drum. Ask for a cost comparison for a replacement.

## Powered rotary brushes

Why do rotary brush manufacturers leave the construction of the driving mechanism up to the developer? We make life easier for you: we build the motor inside the brush! Whatever your needs, the maintenance-free drum motor is integrated into the rotary brush and can be mounted horizontally or vertically, saving you space and valuable time during construction.

Only the mounting of our active rotary brushes need to be designed and it is suitable for a wide range of applications including food processing, packaging, pharmaceutical and many other industries.

## Big on small belts:

### Interroll NarrowDrive

Compact, powerful and reliable, this premium component drives belts as narrow as 68 mm at speeds of 0.06 up to 1.16 m/s in conveyors ranging in length from 250 mm to 2,000 mm. For quick and easy installation within the conveyor frame, the Interroll NarrowDrive is available as a complete solution consisting of a DC drive unit, a 50 mm idler roller complete with mounting brackets.

This space saving concept is ideally suited to replace geared motors in numerous narrow belt applications around the world.

### Pallet Drive solutions

The Interroll Pallet Drive concept provides a space-saving, cost-effective and working environment friendly alternative to conventional driven rollers using gear motors with chains or belts and to outdated manual methods of pallet

transportation in packaging, distribution, and logistics centres. Pallet Drives, driven Rollers and Slave Rollers are designed to fit most common pallet conveyor modules and are suitable for handling all standard pallet sizes for maximum loads of up to 1,000 kg.

This unique concept provides full ZPA functionalities for straight modules, turntables, transfer cars and other transfers.

### Optional power

To expand the field of operations, where electricity is unavailable or undesirable, Interroll offer a full range of hydraulic powered drum motors.

### Made to perform – beyond all boundaries

Powered or gravity driven: Our product range represents a reliable quality standard for dynamic, efficient material flow across all continents and in all sectors.

With an experienced eye for the big picture, we offer you the kind of components that are versatile and essential building blocks in the portfolio of any successful planner or developer.
